

Implementation of an Integrated care package

Cross country lessons: Cambodia, Belgium and Slovenia

Irena Makivić, Monika Martens, Katrien Danhieux, Vannarath Te, Savina Chham, Josefien Van Olmen, Antonija Poplas Susič

BACKGROUND

T2D AND HT ARE INCREASINGLY DOMINANT IN THE GLOBAL BURDEN OF DISEASE.

Integrated care packages include:

- ✓ identification of people with T2D and/or HT
- ✓ treatment in primary care
- ✓ health education
- ✓ self-management support
- ✓ collaboration among caregivers.

RESEARCH QUESTION:

How is the integrated care package currently implemented in health care organisations in different countries?

METHODS

TWO SITES IN EACH COUNTRY FOR ASSESSMENT OF THE ICP IMPLEMENTATION

→ an adapted framework based upon the implementation of Chronic Illness Care Assessment for quantitative and qualitative data collection

No or little		Moderate		Almost complete or full	
No implementation	Little implementation	Some implementation	Moderate implementation	Almost complete implementation	Full implementation
0	1	2	3	4	5

DATA COLLECTION -> MULTI-METHOD APPROACH THROUGH:

- observations at the health facility;
- informal semi-structured interviews with key informants or health facility managers; or
- inspection of documentation at the health facility.

ANALYSIS

Implementation of the ICP variation scored for each site in each country.

The lessons that could be learned through different countries' approaches and qualitative analysis of the organisational context, barriers and facilitators.

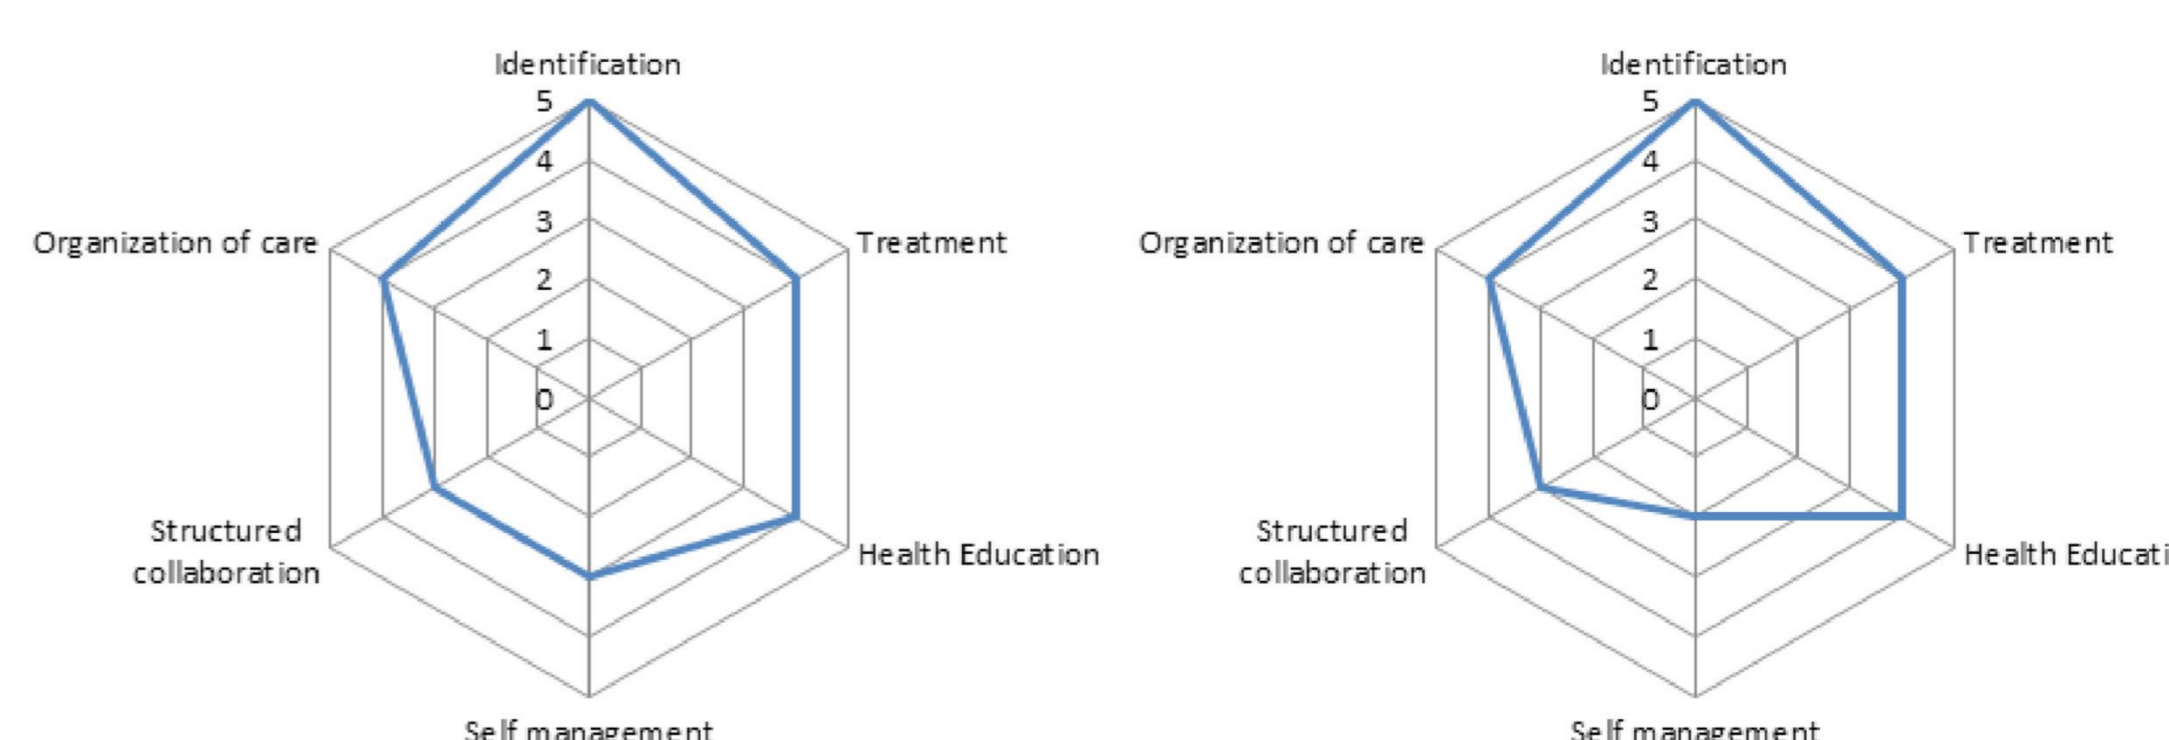

RESULTS

QUANTITATIVE SCORE of two sites in Slovenia

-> the depth and width of qualitative analysis

-> understanding of the organisational context

Average grades of the ICP in urban and rural part of Slovenia

The results can inform the development of scale-up strategies in those and similar countries.
